LAB SHEET 3

Full Stack Development — Mini E-Commerce Project

Completed Answer Sheet: Building the Storefront (HTML + CSS)

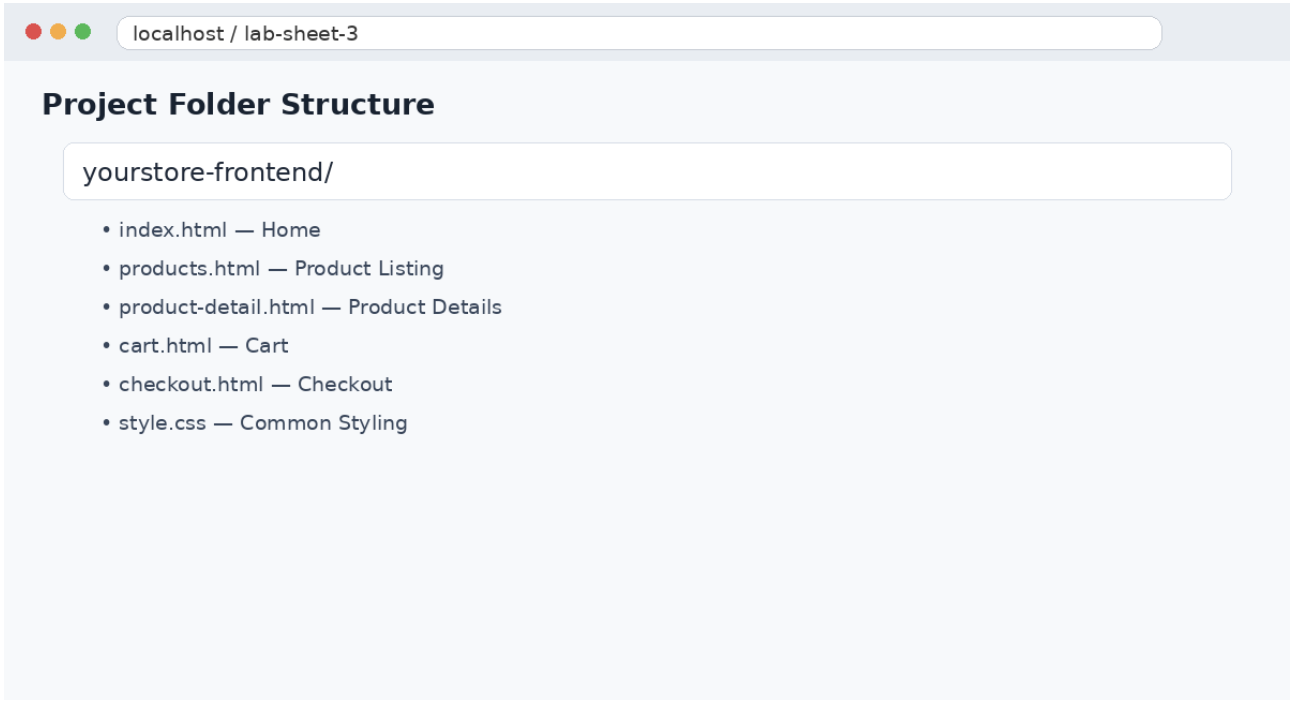

Prepared from the uploaded lab document. The source contains 16 tasks covering HTML Structure (Phase 1) and CSS Styling (Phase 2). The title is set to LAB SHEET 3 as requested.

Section	Questions	Coverage
Part A — HTML Structure	1–8	Project files, header, pages, products, detail, cart, checkout, footer
Part B — CSS Styling	9–16	Stylesheet, variables, Flexbox, cards, grid, form, media query, cart/footer

1. Create the project folder and pages.

Answer: Create a folder named <yourstore>-frontend and place the five required HTML pages inside it: index.html, products.html, product-detail.html, cart.html and checkout.html. Keep style.css in the same project folder.

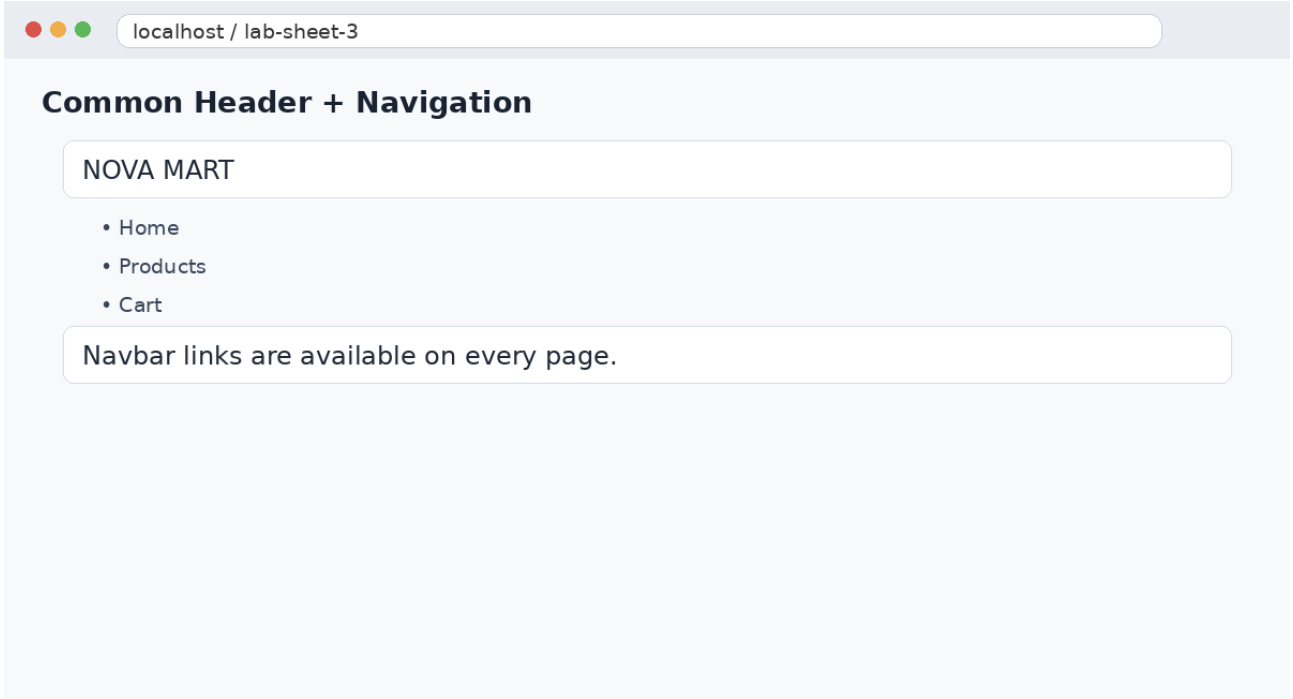

Output / Diagram:

2. Add a common header and navigation.

Answer: Use the same header on every page. It contains the store name/logo and a navigation bar with Home, Products and Cart links so the pages can be opened from one another.

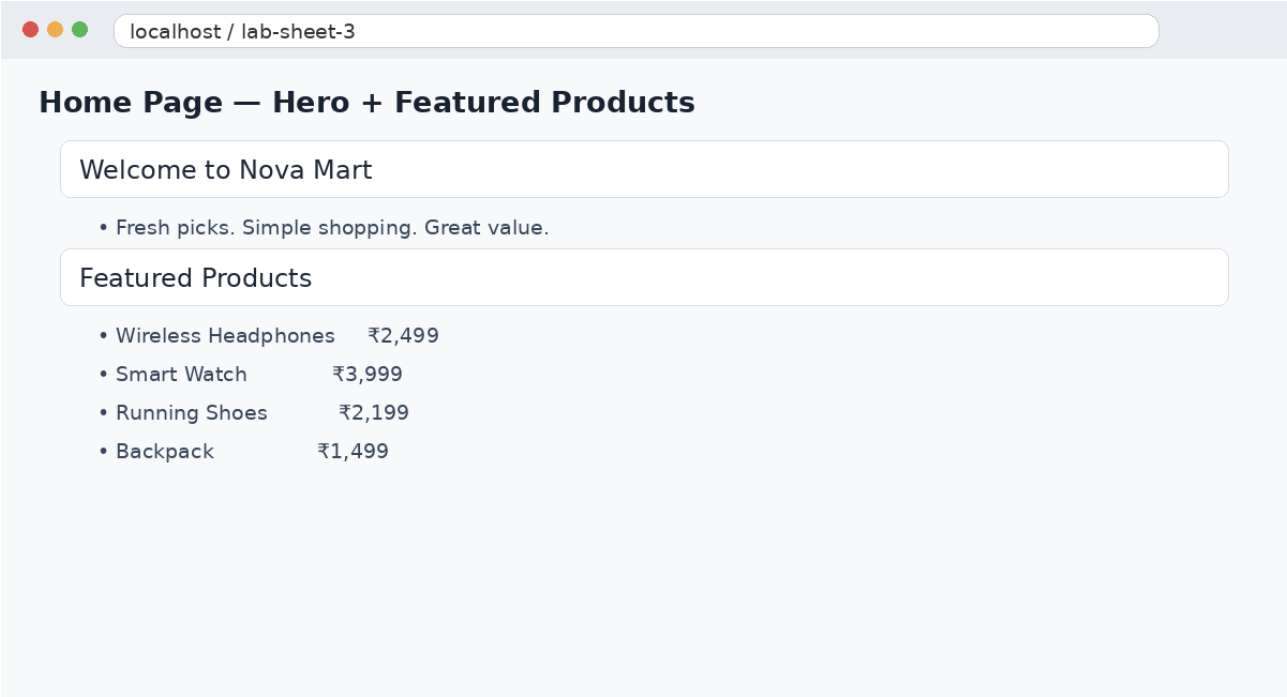

Output / Diagram:

3. Build index.html with a hero and four featured products.

Answer: Add a hero/banner introducing the store and a Featured Products section containing at least four product blocks. Each block can contain an image placeholder, product name and price.

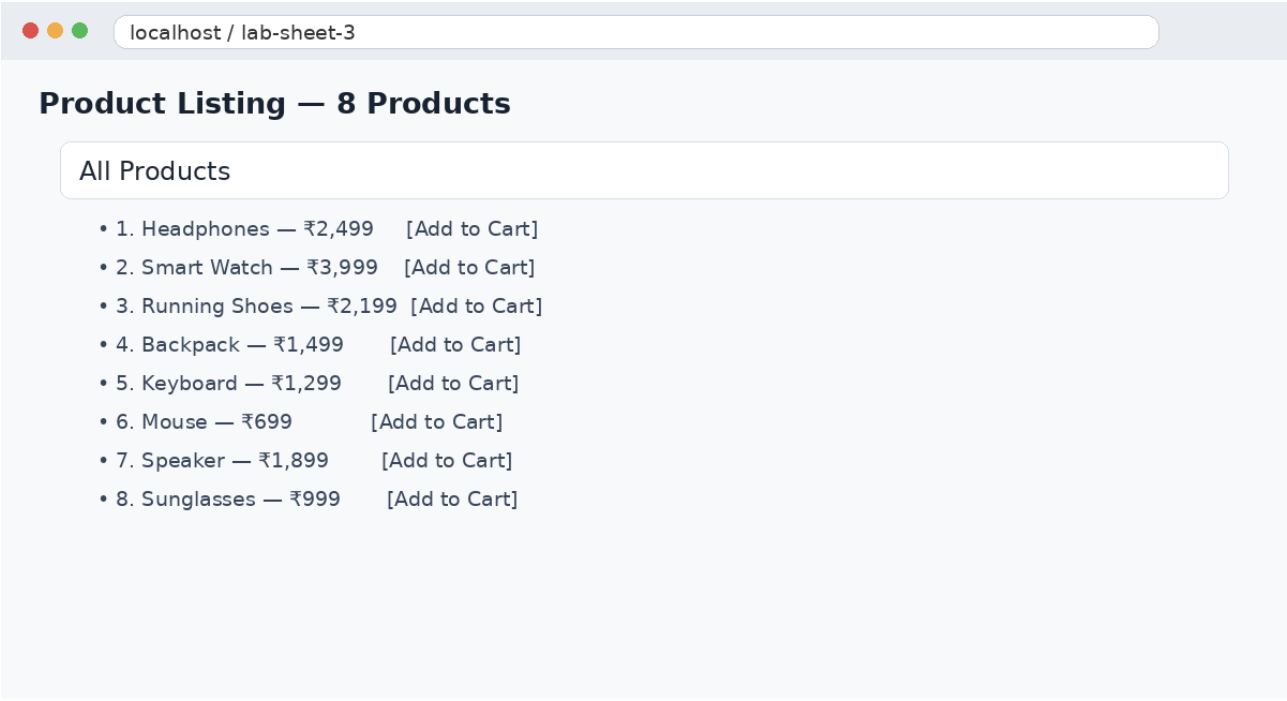

Output / Diagram:

4. Build products.html with at least eight products.

Answer: Repeat a product block eight times. Each block contains an image placeholder, name, price and an Add to Cart button.

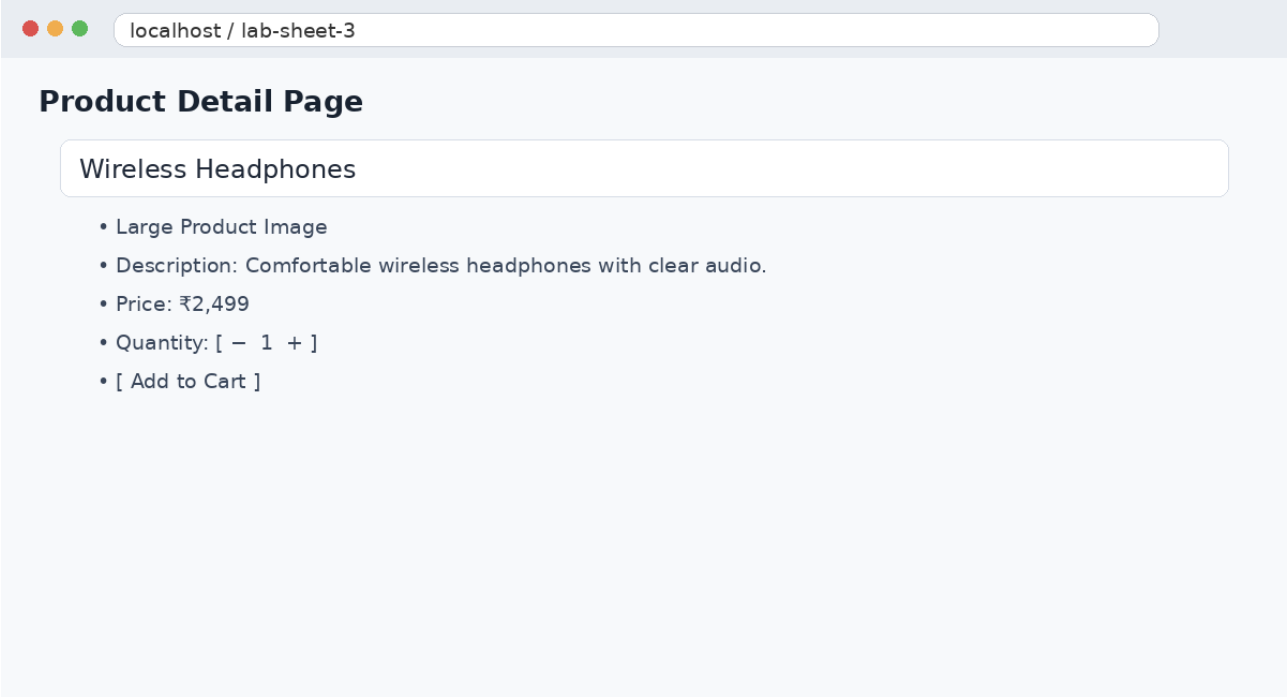

Output / Diagram:

5. Build product-detail.html.

Answer: Show one selected product in greater detail: larger image, product name, description, price, quantity selector and Add to Cart button.

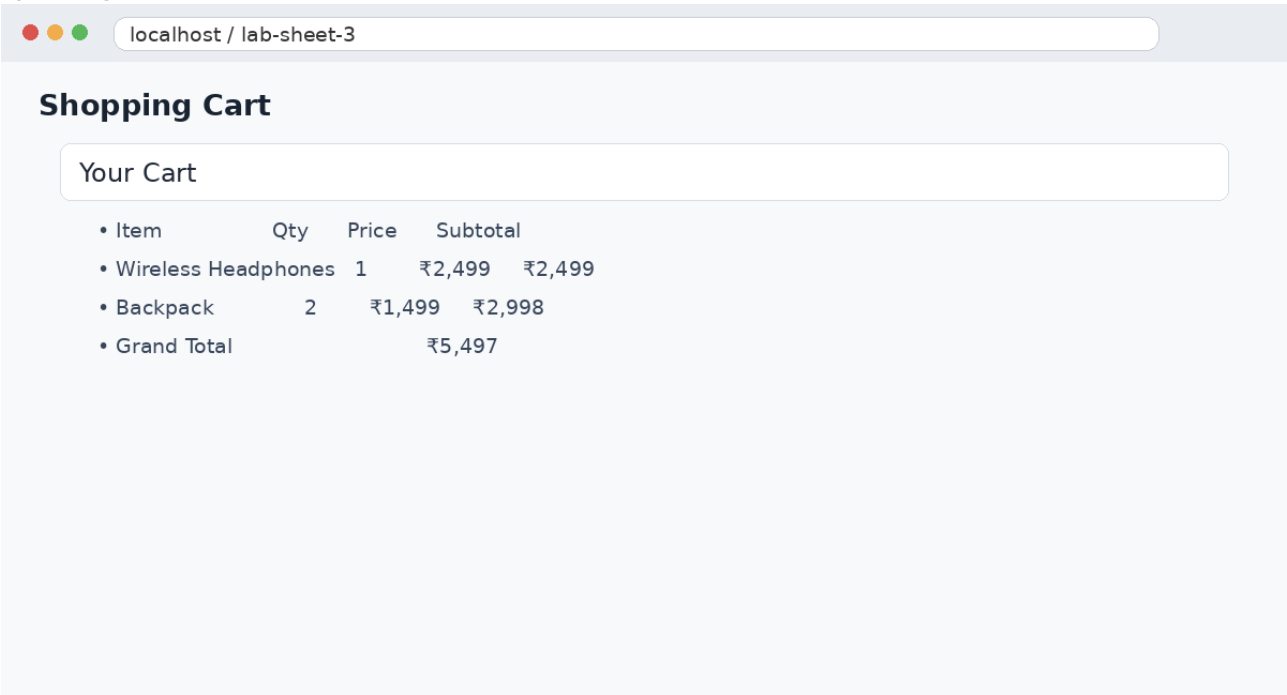

Output / Diagram:

6. Build cart.html.

Answer: Use a table or list with item name, quantity, price and subtotal. Finish the table with a Grand Total row.

Output / Diagram:

7. Build checkout.html.

Answer: Create a form containing Name, Address, City, Pincode, Phone and Payment Method radio buttons, followed by a Place Order button.

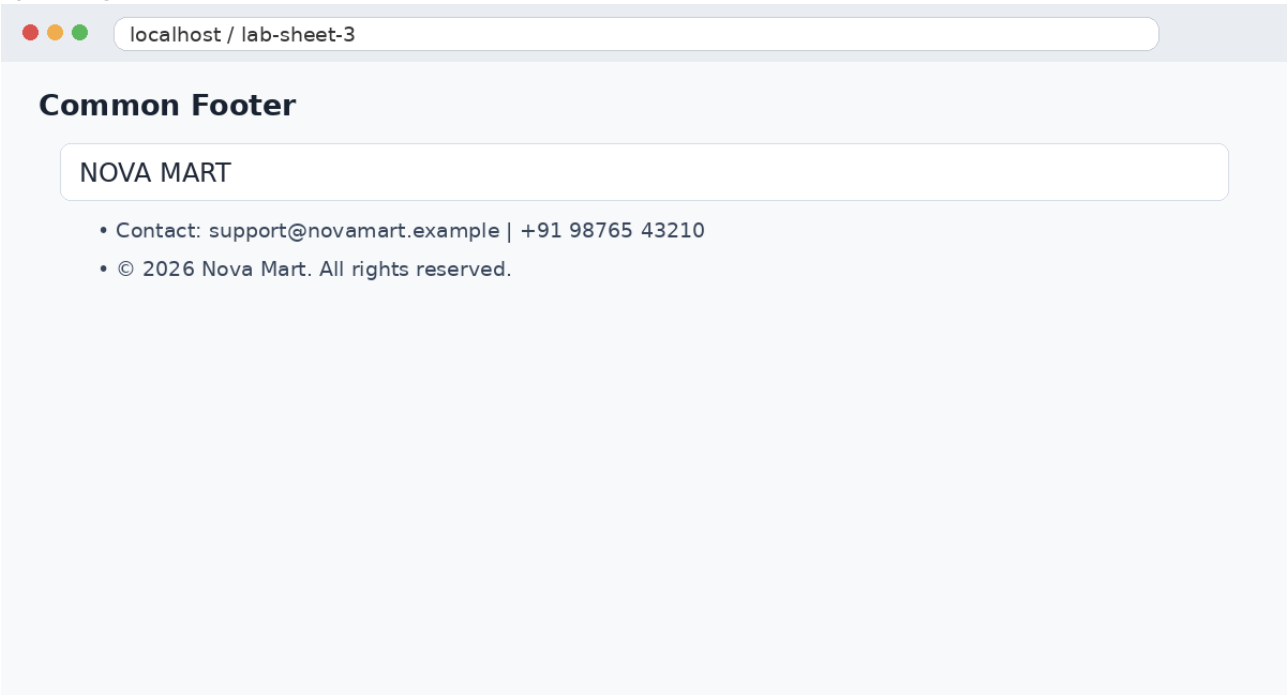

Output / Diagram:

8. Add a common footer.

Answer: Use the same footer across all pages. Include contact information and copyright text.

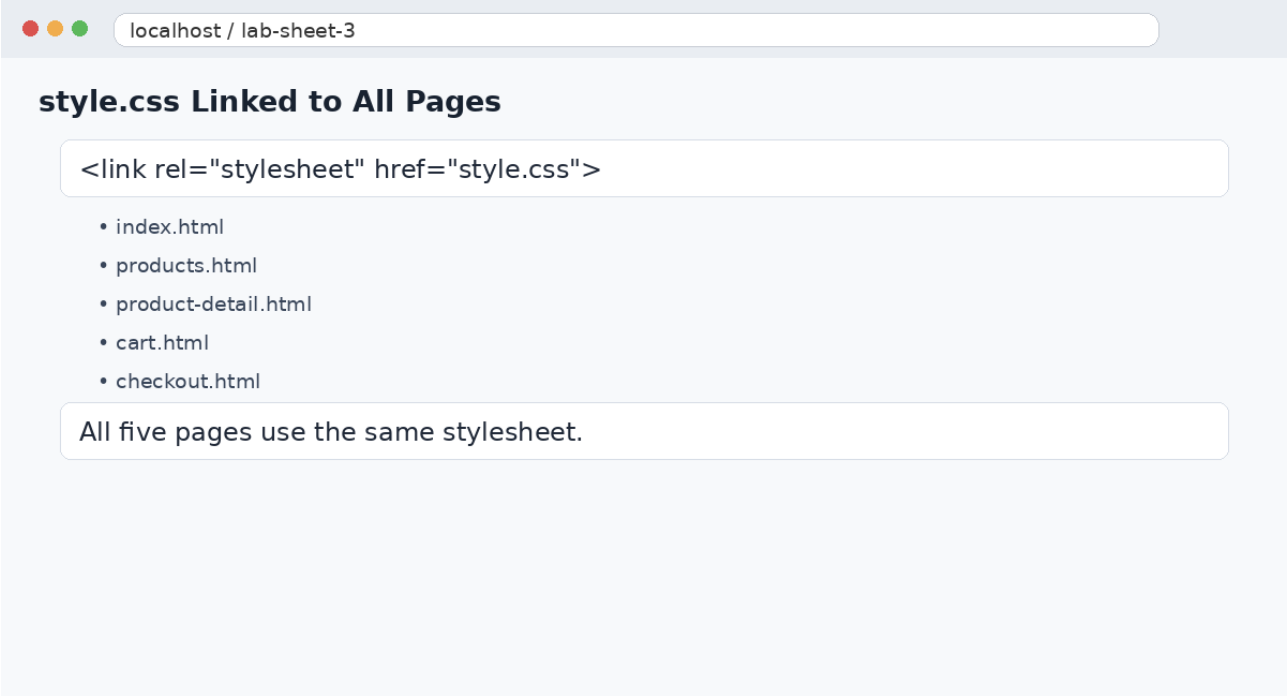

Output / Diagram:

9. Create and link style.css.

Answer: Create one common stylesheet and link it from all five HTML pages with a <link rel="stylesheet" href="style.css"> element.

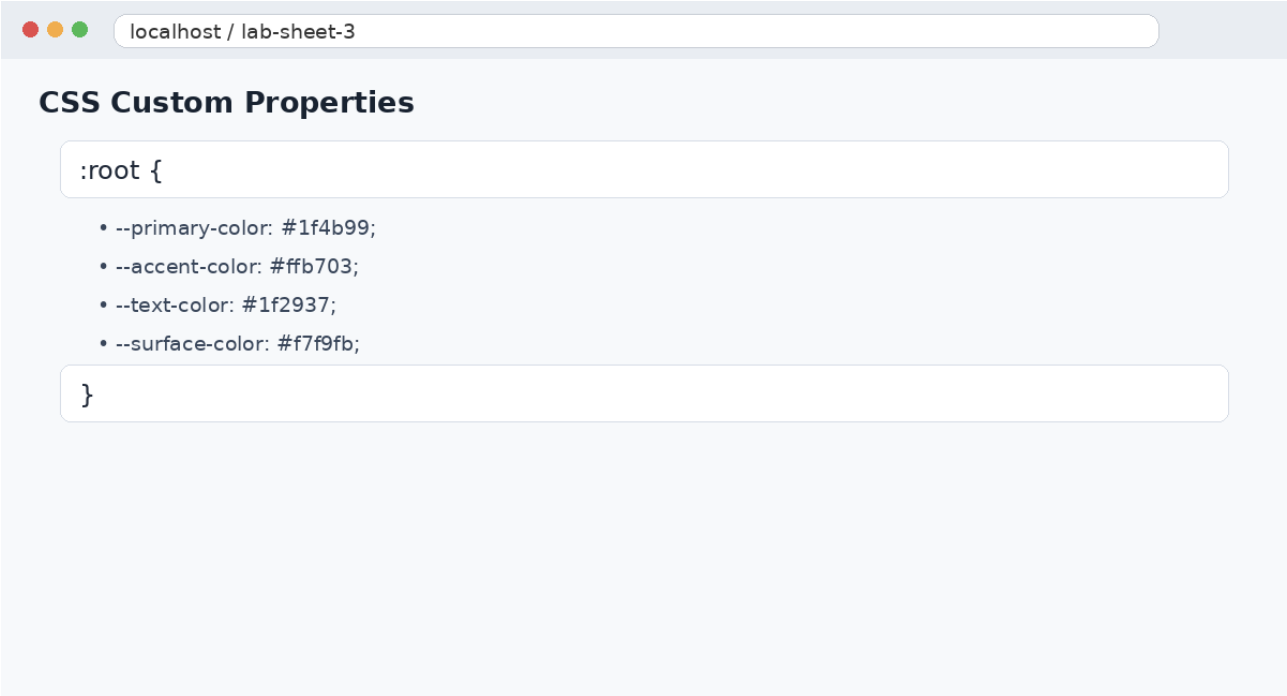

Output / Diagram:

10. Define CSS custom properties.

Answer: Define 3–4 theme variables in :root, such as primary color, accent color, text color and surface/background color, then reuse those variables throughout the stylesheet.

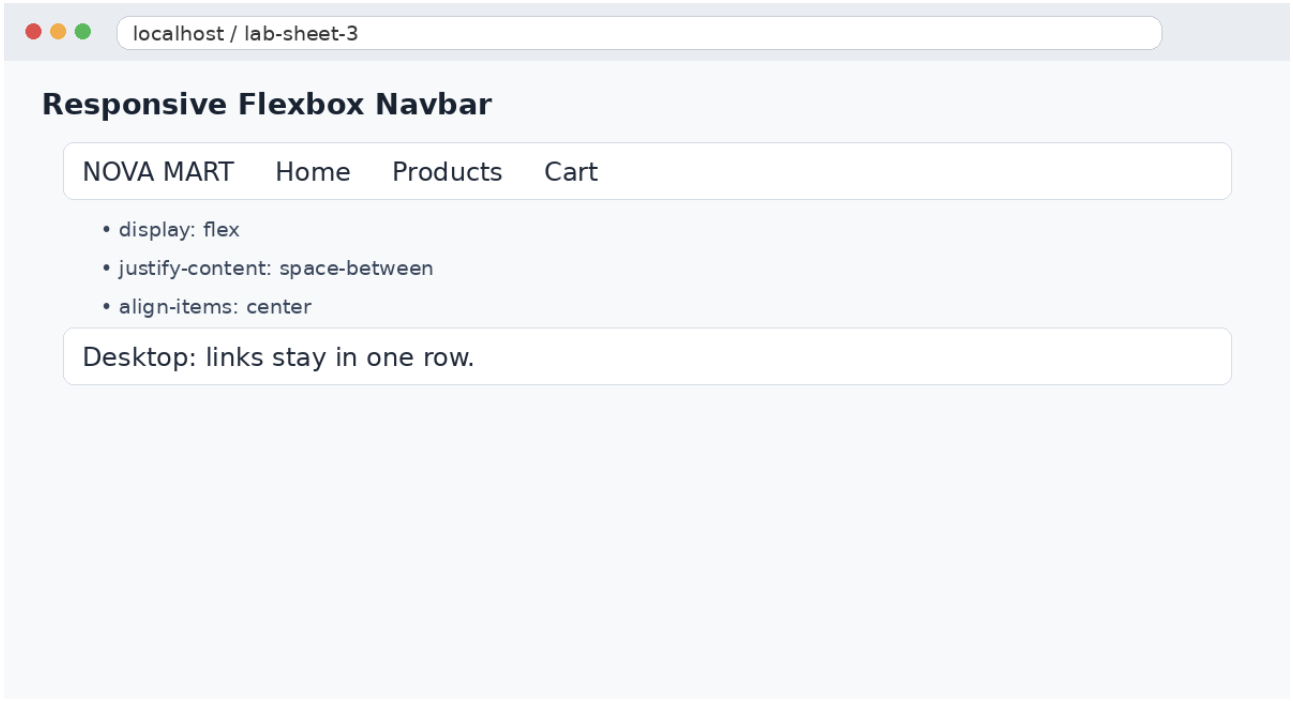

Output / Diagram:

11. Style the navbar with Flexbox.

Answer: Use display:flex on the navigation layout. Use spacing/alignment properties so the links sit horizontally on larger screens and can collapse sensibly on smaller screens.

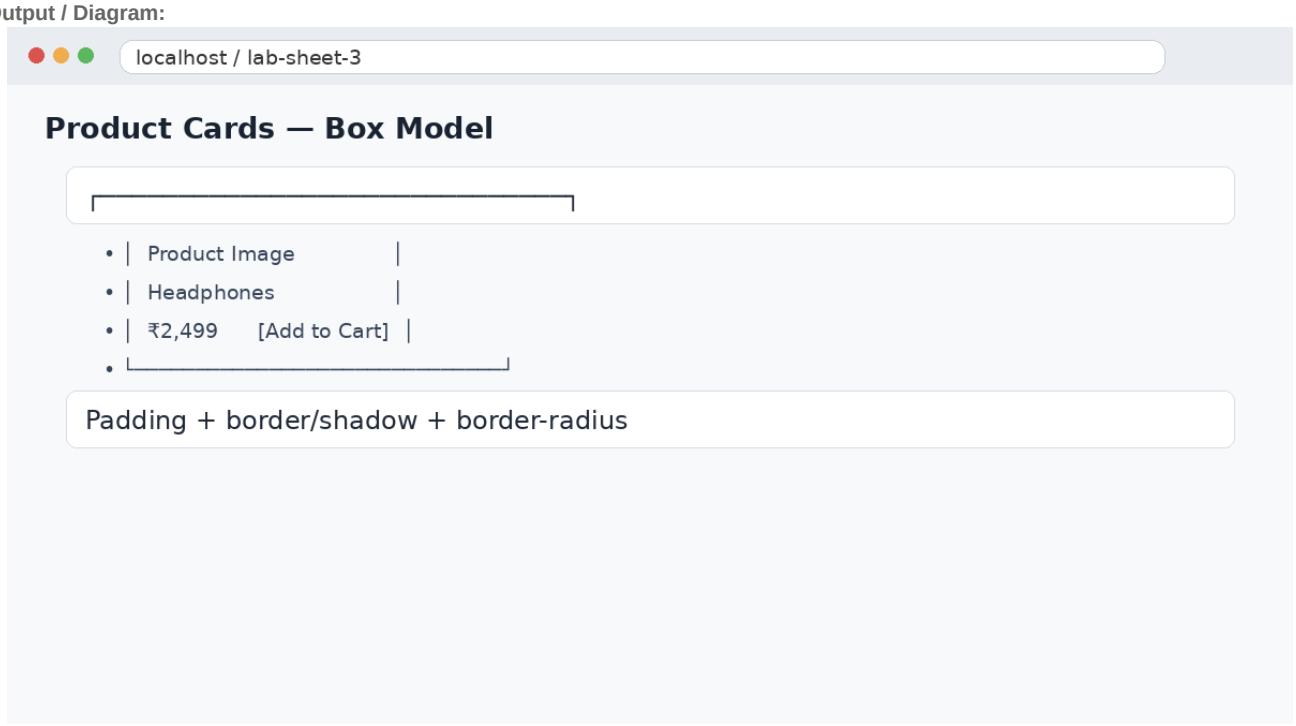

Output / Diagram:

12. Style product blocks as cards.

Answer: Apply Box Model concepts such as padding, border or box-shadow, and border-radius to make each product block visually read as a card.

Output / Diagram:

13. Arrange products in a responsive grid.

Answer: Use CSS Grid or Flexbox to arrange product cards in rows and allow them to wrap responsively when the available width changes.

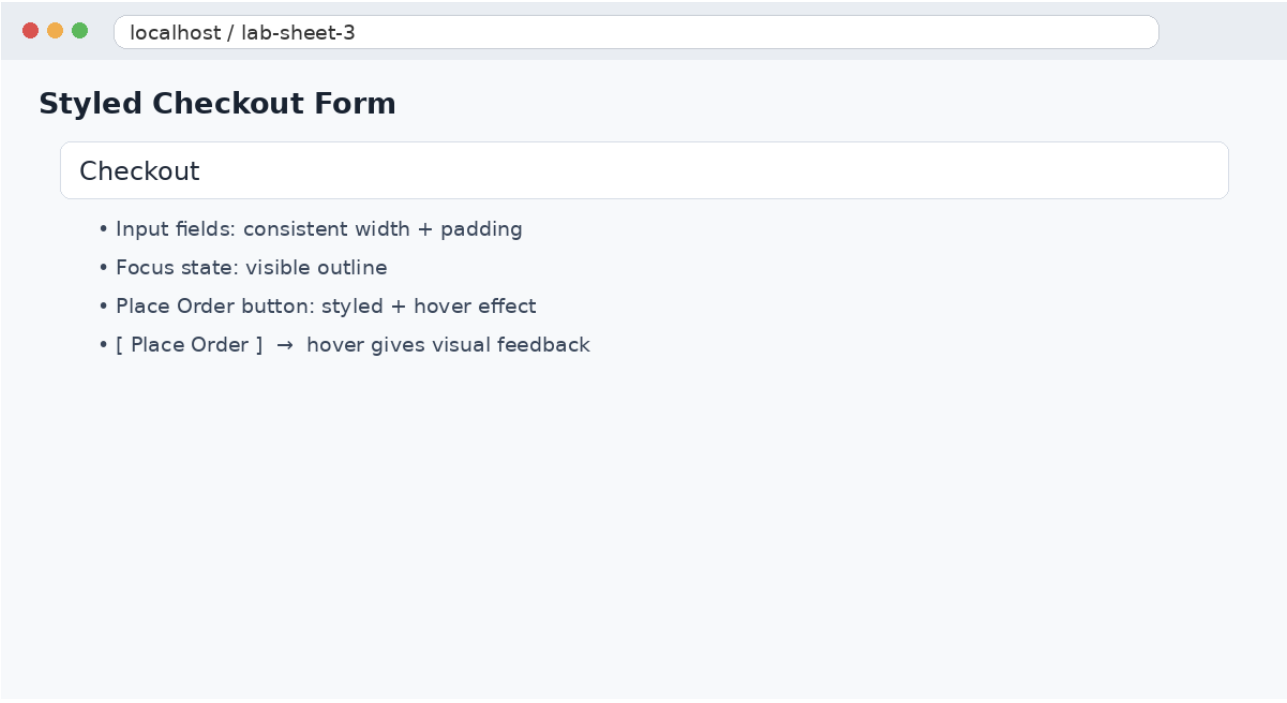

Output / Diagram:

14. Style the checkout form.

Answer: Give inputs consistent sizing and padding, add a focus state, and style the submit button. Add a hover effect to make the button interaction visible.

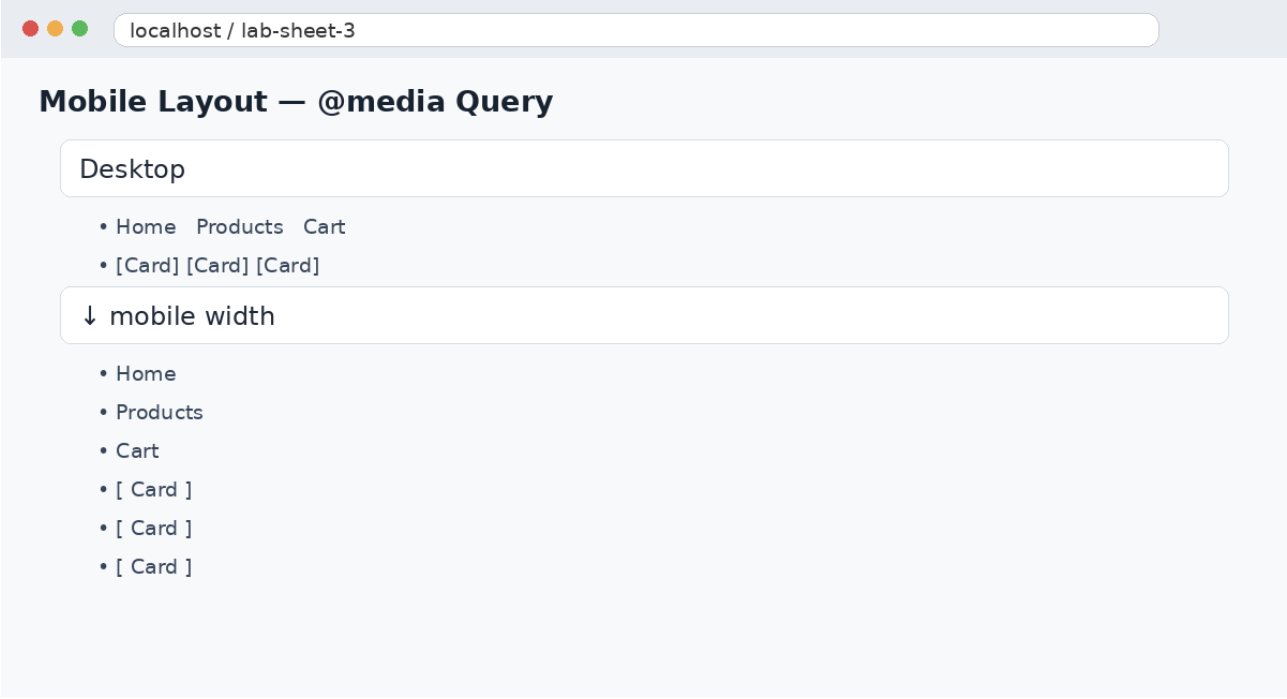

Output / Diagram:

15. Add a mobile @media query.

Answer: Use at least one @media rule so the layout changes at mobile width—for example, stack navigation links vertically and make product cards single-column.

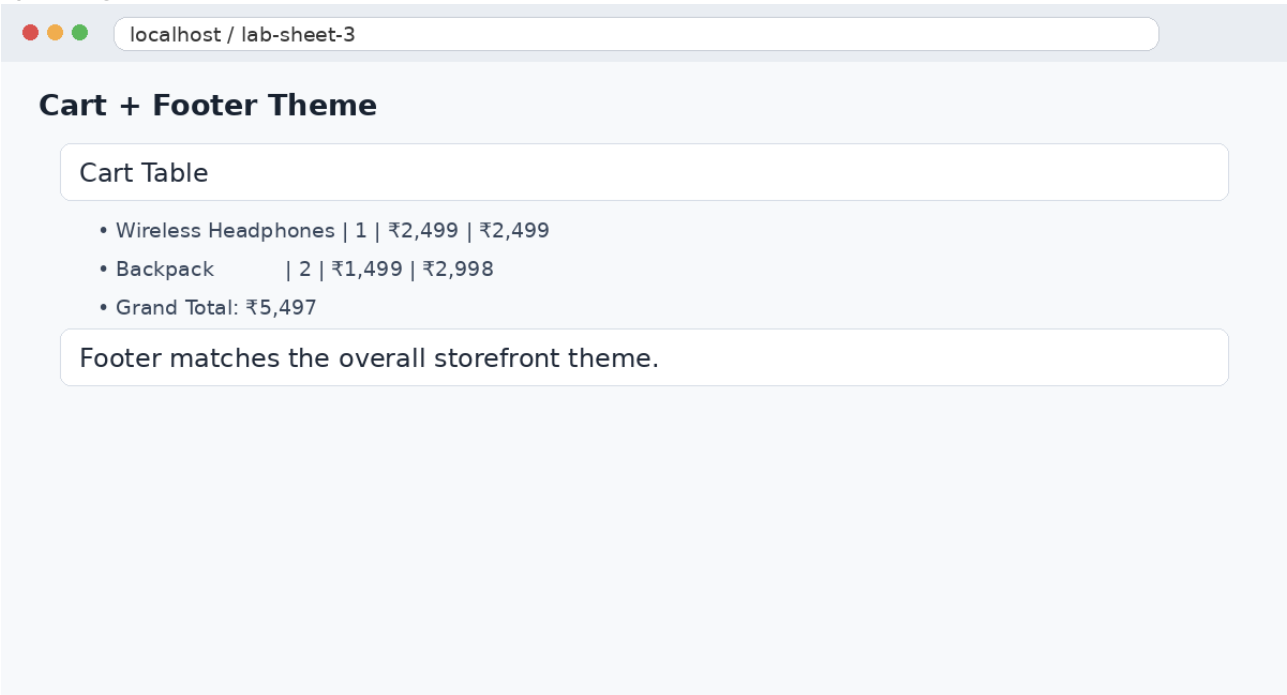

Output / Diagram:

16. Style the cart and footer.

Answer: Apply the same visual theme to the cart table/list and footer so these sections match the rest of the storefront.

Output / Diagram:

Submission Checklist

✓ index.html — Home page with hero and featured products

✓ products.html — at least 8 products

✓ product-detail.html — full product details

✓ cart.html — items, quantities, subtotals and grand total

✓ checkout.html — required fields, payment radio buttons and Place Order

✓ Common header/navigation and footer

✓ style.css linked to all five pages

✓ CSS variables and responsive Flexbox/Grid styling

✓ Product cards styled with Box Model properties

✓ Checkout focus/hover states

✓ Mobile @media query

Source note: the uploaded document itself is titled Lab Sheet 1; this PDF heading is intentionally LAB SHEET 3 per the user's request.
